5COSC021W Coursework 1 - INDIVIDUAL template 2025_26

- Use this template to structure the individual part of coursework1. Ensure that the correct information is in each white box. The advice for each box is basic guidance to help you focus your answer.
- YOU MUST USE THIS TEMPLATE FOR THE INDIVIDUAL PART OF COURSEWORK 1.
- The current size of the boxes is not indicating how much you should write; change their size as you need but ensure that you make complete points, concisely, without repetition or going off topic.
- When you save the file, put your name and registration number in the file name, eg **'5COSC003W_cwk1_individual_Kelly_Garret_12345678.doc'.**
- A reminder of plagiarism: If you use bits of someone else's report in yours or if you give your report to someone else to use this will be the academic offence called 'collusion'.

Surname	Patel
Forename	Maurya
Registration No:	W2112200

By submitting this coursework you agree to the following:	
I confirm that I understand what plagiarism is and have read and understood the section on Assessment Offences in the Essential Information for Students. The work that I have submitted is entirely my own. Any work from other authors is duly referenced and acknowledged.	I confirm

List here the team name and the other members of your group	The Avengers: Group H Abdul-lateef Hussain Maurya Patel Lucas Garcia Korotkov Mohammed Suliman Roshid Riagul Hossain

1. Professional conduct – Communication (10 marks)

1.1 Seeking and using feedback

Guidance: List here, in a table, constructive feedback you have received from your team-mates, industry mentors and your tutor on your work and how you used it.
Feedback: **Be descriptive and specific** – but do not use quotations
Date Received: when was the feedback given
Source: Who gave you the feedback
How you used it: How did it inform your actions/changes

Feedback	Date received	Given By	How you used it
Improve ERD readability: group related entities, fix spacing/alignment, reduce line crossings, keep cardinalities visible, use consistent naming/box sizes.	29/1/26	Lucas Garcia Korotkov	I rearranged the ERD layout (grouping tables, spacing, clearer relationship lines) and standardised naming so the final ERD is easier to read and review.
Improve ERD readability/presentation using the same layout principles (grouping, spacing, avoiding line crossings, consistent naming/box sizes).	29/1/26	Mohammed Sulimann Roshid	I applied the feedback by tidying the ERD layout and formatting to make relationships clearer in the final submission.
UI should use more Sky-aligned colours and better contrast to look more appealing/professional.	26/2/26	Abdul-lateef Hussain	I updated the high-fidelity UI draft to use a more consistent colour scheme and clearer contrast across buttons/navigation/badges.
Shared first ERD draft (created in draw.io) that I could build on and improve into the final ERD.	26/1/26	Riagul Hossain	I used the draft as a baseline, then refined/normalised the final ERD and validated entities/relationships against requirements.
Clearly show the relationship cardinalities (e.g., 1..1 / 0..* etc.) on the ERD so it's easier to understand the multiplicities.	29/1/26	Lucas Garcia Korotkov	I updated the ERD by adding the missing cardinalities on the relationships and then re-checked the key links to make sure the diagram matched the intended rules

1.2 Giving constructive feedback

Guidance: List here, in a table, the CONSTRUCTIVE feedback you have given to your team-mates and what was the problem you were trying to solve.
Feedback: **Be descriptive and specific** – but do not use quotations. Evidence of this should also be in the group's Trello or other tool used by the group
Date Given: when was the feedback given
Source: To whom did you give the feedback
The problem you were trying to solve: What did you see as the issue?

Feedback	Date given	Given to	The problem you were trying to solve
I reviewed the initial low-fidelity wireframes and gave feedback to improve layout and navigation clarity, and to ensure screens matched the required user flows.	10/2/26	Riagul Hossain	The user journey/navigation was not fully clear across screens, so users could get lost between team browsing, team details, and dependencies.
I reviewed UML use case diagram drafts and gave feedback to improve readability (align related use cases, reduce line crossings, improve spacing) and overall correctness vs. required functionality.	29/1/26	Mohammed Sulimann Roshid	The UML diagram was at risk of being hard to read/validate, which can hide missing links between actors and use cases and reduce marks.
I reviewed the test plan section and advised improving clarity/completeness (each test should include pre-conditions, inputs, and expected results) so it can be executed consistently.	10/2/26	Riagul Hossain (initial draft)	Some tests could be interpreted differently without explicit preconditions/inputs/expected outputs, causing inconsistent results.
I repeated the same test-plan clarity feedback during the second draft stage to ensure updates stayed consistent and executable.	26/2/26	Abdul-lateef Hussain and Mohammed Roshid (2nd draft)	When adding more rows/columns, there was a risk of inconsistent detail across test cases, so I pushed for a consistent "executable" level of detail.

Add short descriptions/captions on each storyboard frame (what the user is doing and why), so the storyboard is clear even if someone looks at it quickly.	10/2/26	Lucas Garcia Korotkov	The storyboard screens were understandable visually, but without descriptions it was easy to miss the exact user journey and what each step represented

2. Time management (10 marks)

Guidance: YOUR reflection on your time management and the group's time management, discussing both good examples and areas of improvement. Include also here :

- which of your time management techniques worked well and what evidence you have to prove it. **Be specific, support your text by providing examples related to specific time management techniques, how you came across them, how did you use them for this project/cwk/module.**
- where does your time management need to improve. **Be specific, provide examples related to this project/cwk/module.**
- what you need to do to improve it. **Be specific, provide examples related to this project/cwk/module.**
- how will you know you have done it. **Be specific, provide examples related to this project/cwk/module.**

Marks will be given for text linked to examples of successful output. Do not give a general description of what a technique is: eg what Pomodoro technique. Provide specific examples of what you did and how it improved your output.

For CWK1, the time management technique that worked best for me was setting mini-deadlines based on our meeting dates, so I always had something finished to show instead of leaving things half done. I started doing this after realising the group could give much better feedback when they were looking at a complete draft (not just an idea).

Before our first Teams meeting on 29 Jan, I finished the logical ERD so the team could review a full diagram and comment on clarity/layout. After that, I used the feedback to tidy up the ERD presentation so it was easier to read and follow. Before the second Teams meeting on 10 Feb, I focused on improving the low-fidelity wireframes and finishing the final low-fi set, because I wanted us to confirm navigation and user flow early. Then before our last meeting on 26 Feb (engagement week), I completed the final high-fidelity screens so we

could do a proper final check for consistency across the UI (same patterns, layout and styling).

One thing I need to improve is leaving more time for the last stage (polish and consistency), because it always takes longer than I expect when there are lots of pages/screens to check. Next time I will plan a specific QA/polish slot earlier (not right at the end) and I will time-box it, so it doesn't turn into last-minute rushing. I will know I've improved if all the main artefacts are finished at least 48 hours before the deadline, and the remaining time is only used for formatting and small fixes (not big changes).

For the group, our time management was better when we used the Teams meetings (29 Jan and 10 Feb) and the engagement week in-person meeting (26 Feb) as checkpoints, because it kept everyone aligned on what needed to be ready next. A clear improvement would be scheduling an extra earlier "quality review" meeting, so we catch layout/consistency issues sooner instead of close to submission.

3. Project management (10 marks)

Guidance: YOUR reflection on your and the group's project management process during cwk 1, discussing both good examples and areas of improvement. Include here aspects of :

- Project planning, tasks distribution, tasks execution to date, monitoring and risk management
- **Be specific and provide examples related to your project and the project management tools and process used in your group project**

For CWK1, our project management was basically: split the coursework by sections, track it on Trello, and use WhatsApp gc + meetings to keep everyone moving. We planned the work in Trello with separate areas for the main deliverables (ERD/database structure, UI, UML, and test plans) and also had “admin” lists like documentation and a checklist (so things like the team contract / template / setup didn’t get forgotten). We also kept meetings as checkpoints (29 Jan, 10 Feb, and 26 Feb during engagement week) to review progress and decide what needed doing next.

Task distribution was clear because we assigned by section. I led the final logical ERD and produced the final UI designs (final low-fi and final high-fi), while Riagul did the first ERD draft and the early UI drafts, and then I improved/finalised them after feedback. Abdul-lateef did the database structure draft/implementation in SQLite, and for UML Abdul-lateef and Mohammed worked on the use case diagram. Lucas did the final storyboards, and in test plans Mohammed did the positive tests while Abdul-lateef did the negative tests.

For monitoring, Trello made it easy to see what section was done and what was still stuck, and WhatsApp was useful for quick questions when someone needed a fast answer rather than waiting for the next meeting. The meetings helped with control as well, because if something wasn’t ready we could agree a new plan straight away instead of assuming it would “sort itself out”. The main risks for us were consistency (UI pages not matching each other, diagrams becoming messy/crowded) and leaving too much merging/polish to the end. We reduced that by doing feedback cycles and using final review points before we locked things in (especially for layout/readability and keeping the UI consistent).
If I could improve one thing next time, it would be making Trello stricter: every card should have an owner, a mini checklist, and a target date, because otherwise you can’t tell if something is “nearly done” or actually done. I’d also add one earlier quality-check meeting that’s only for consistency across sections (ERD, UI, UML, test plans), not just a general progress chat.
